ABOUT ME

Third-year B.Tech student with strong hands-on coding experience in AI and Data Science projects. Passionate about building real-world solutions using machine learning and data analysis.

EDUCATION

Anna University | 2023-2027

Meenakshi College of Engineering

Bachelor of Technology :

Artificial Intelligence and Data Science

PROJECTS

Predictive Analysis for Machinery

Builds a machine learning model using a Random Forest classifier to predict machine failure based on temperature, vibration, and pressure data. It evaluates performance with metrics and visualizations, and can predict whether a machine needs maintenance from new input data.

AI Resume Screening System

An AI resume screening system uses machine learning and natural language processing to automatically analyze and rank resumes based on job requirements. It helps recruiters quickly identify the most suitable candidates, saving time and improving hiring efficiency.

Fake News Detection

A fake news detection system uses machine learning and natural language processing to analyze news content and identify whether it is real or misleading. It helps users and platforms filter out misinformation and improve the reliability of shared information

SKILLS

- Python
- Numpy
- Data Visualization
- SQL
- Pandas
- Machine Learning
